Version 2026-05-09

Brackets [X] refers to the matching Core rulebook chapter

Maximum value of a die is replaced with a double roll = two dice of the same type and only the result of the new roll counts. There are no additional double rolls beyond the first [4].

Any bonus is added to the result after all dice rolling is done. If this final result is equal to or over difficulty level (DL) you succeed. Double 1:s = critical failure. Default DL is 4.

Each Risk (R or ) on a roll makes critical failure more likely. 1R means you also fail critically on a final result of 1, 2R means critical fail 2 or less etc. [4.1]

Degree of success is counted in steps of 5 above the DL. For example when shooting you may draw an additional Wound card for every +5 margin of success. Stunts can be used on actions: +1 bonus and round the result up to the next +5 degree [4.2].

Has expertise	+1 bonus
No expertise applied but also not required	No expertise modifier
Lack required expertise	+1R per missing. Result capped at skill level x2.

Stress (S or ): When at Stress Limit make a panic roll [5.2].

Leadership Points (LP): Squad leader can use LP to make leadership (Charisma) rolls. This can be a small speech to remove S from other squad members or provide bonus for physical work [5.3].

Health – effect applies when last health bar box is checked [6]

-  Light Exhaustion , effect: +1R on all skill rolls.
-  Heavy Exhaustion , effect: Unconsciousness roll, Tou vs DL4 +  outside Health Bar.
-  Trauma , effect: Death roll, End vs DL4 +  outside Health Bar.

Combat [7]

Close combat: Opposed roll, winner draw 2 Wound cards and do unarmed+weapon damage or choose an action [7.3].

A soldier who succeed on a shooting roll get to draw a Wound card. Per 5 above the DL you get to draw one extra. Aimed shot: draw one more. Choose one and resolve effects from it. Damage is determined by ammunition and range [8.2]. Subtract any armour and the result of a Toughness roll from incoming damage. If still >0 see result on Wound card and apply effect [8].

Ammo	Type	V. short <30m	Short <100m	Medium <200m	Long <500m
10mmx24 AP	Ballistic	18	14	13	11
10mmx28	Ballistic	22	18	18	16
9mm AP	Ballistic	12	9	7	
Shrapnel Small	Sharp	10			

M10 protection vs Ballistic: 10, vs Sharp: 15. HEAP: Add +5 Damage after penetration.

Bleeding  causes  every turn after the turn you take the wound. IV may restore 2 , which on a Wound card would be shown with round icons:
